INDUSTRIAL APPLICATIONS

***For more than 30 years,
CADDY® has lead the
electrical industry as the
#1 manufacturer of
innovative fasteners...***

Our value-added, spring steel fasteners have earned a reputation for innovation and quality.

ERICO is building on this reputation by bringing CADDY Fasteners innovation to our new offering of supports and fasteners for the installation of heavier electrical systems.

*We manufactured a new family of fasteners specifically for heavy duty industrial construction.
For example, our 6000 Clamping System was made to specifically attach or suspend services such as cable tray, large equipment or pipe works, with maximum security onto steel beams.*

6000 Clamping System

ERICO stands behind the quality and reliability of our fasteners that are shipped from our ISO 9001 Certified facility. In the CADDY tradition, our goal is to make heavyweight industrial fasteners just as quick and easy to install as all our current fasteners. Look to ERICO's CADDY Fastener line for continual product innovation and improvements designed to provide reliable, cost-effective solutions for your fastening requirements.

ERICO®

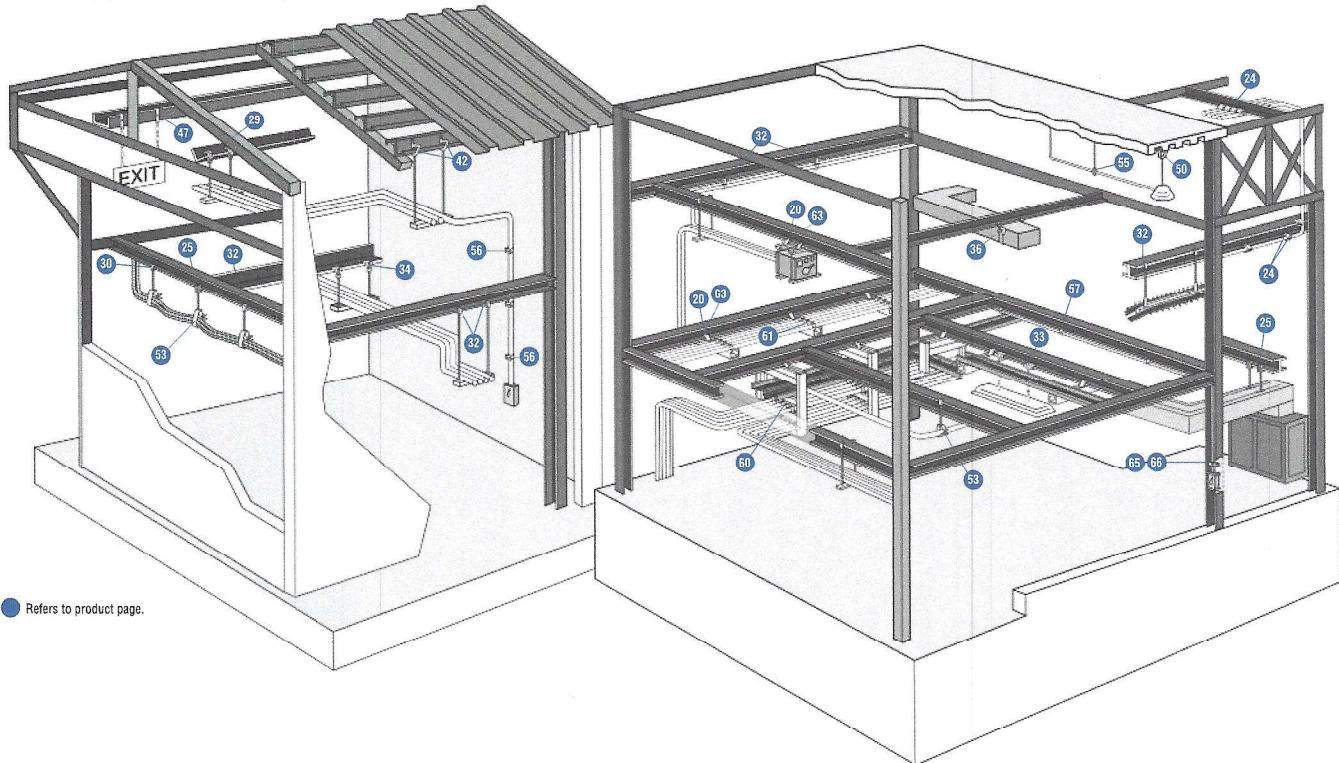

CADDY® Fasteners, a standard in the electrical industry

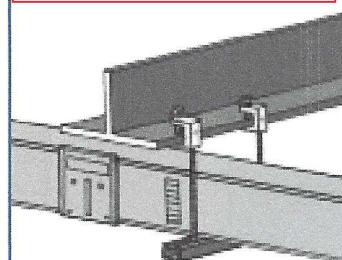

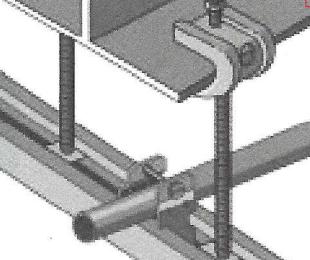

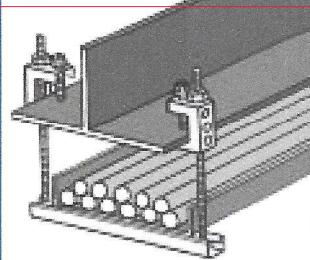

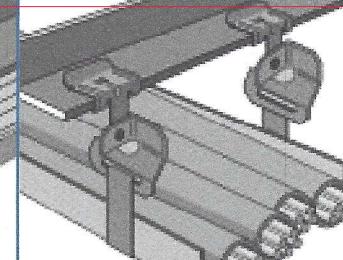

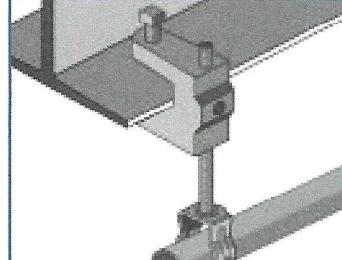

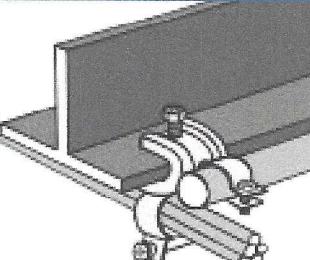

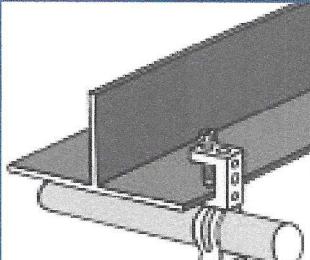

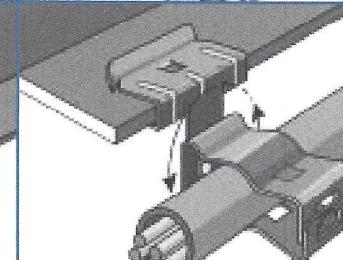

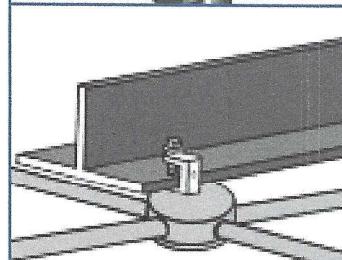

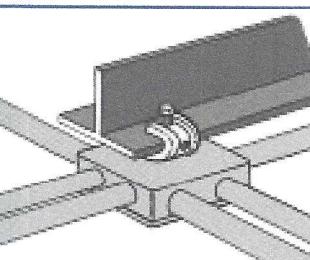

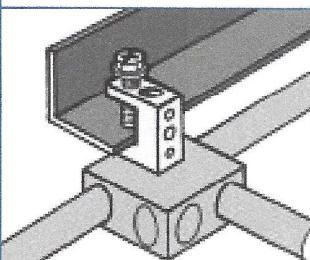

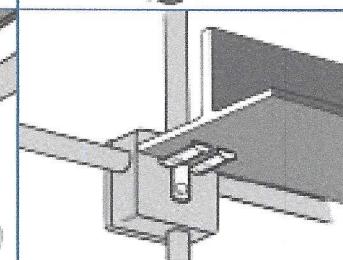

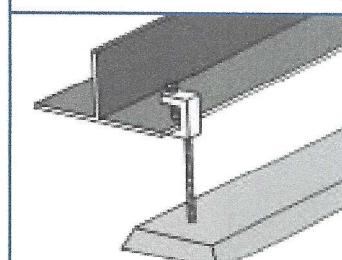

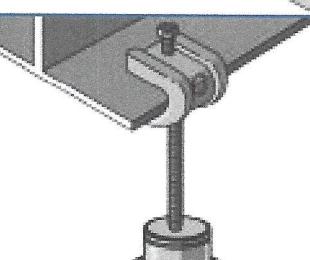

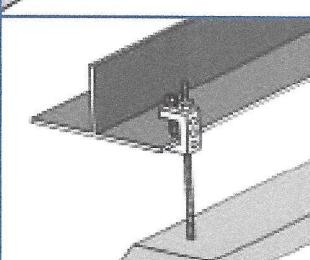

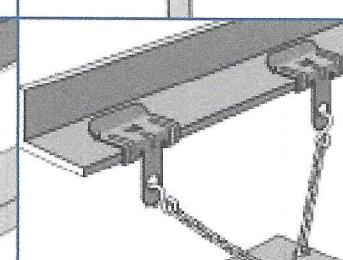

Structural fastening systems require a high degree of reliability, and any compromise on quality cannot be accepted. Every detail of a CADDY Fastener, from its initial conception through design, manufacture and corrosion protection qualities, is aimed towards increasing safety and reliability.

BC26 Universal Beam Clamp with Tapped Hole – BC260025EG

- One thru-hole for easier installation of threaded rod
- Conforms with Federal Specification WW-H-171 (Type 23), Manufacturers Standardization Society ANSI®/MSS-SP-58 (Type 19 and 23)

Part Number	BC260025EG
Material	Cast Iron
Finish	Electrogalvanized
Rod Size (RS)	1/4"
Flange Thickness (FT)	13/16" Max
A	13/16"
Hole Size (HS)	1/4"
Hole Type	Threaded
Screw Diameter (Sc)	1/4"

Static Load 1 (F1)	250 lb
Static Load 2 (F2)	100 lb
Standard Packaging Quantity	100 pc
UPC	78285634025

Setscrew must be tightened and torqued onto the sloped side of the I-beam.

Recognizing that torque wrenches are generally not used or available on many job sites, the setscrew should be tightened so it contacts the I-beam and then an additional 1/4 to 1/2 turn added.

CHANNEL NUTS & HARDWARE

Channel Nuts

B-Line's channel nut is one of the main components of our metal framing system. It is designed to provide essential gripping power and ease during installation. Channel nuts are press formed, machined and hardened from steel which meets the requirements of ASTM A108 or ASTM A36 for our larger sizes.

Bolts, Screws, and Nuts

All bolts, screws and nuts meet the physical and chemical requirements of ASTM A307, SAE J429 or ASTM A563, and have unified inch screw threads (coarse, UNC). ISO metric threads are also available on special request.

EXPANSION ANCHORS

Bolt Anchors

Bolt anchors are designed to be installed flush with the surface of the base material. They are used in conjunction with a threaded machine bolt or in some types, a threaded rod. For temporary applications, some types can be subset below the surface of the base material to allow patching after the fixture is removed.

Screw Anchors

Screw anchors are designed to be installed flush with the surface of the base material. They are used in conjunction with sheet metal, wood, or lag screws depending on the anchor type.

Toggle Bolt

PRODUCT INFORMATION

Toggle Bolt

Hollow Wall Anchor

PRODUCT DESCRIPTION

The Toggle Bolt is a spring wing type hollow wall anchor designed for use in block, wallboard and other hollow base materials. The Toggle Bolt is a two-part assembly consisting of a machine screw and a spring wing toggle. Sizes range from 1/8" diameter x 2" length to 1/2" diameter x 6" length with combo round, flat mushroom, tie-wire or slotted hex head styles.

FEATURES AND BENEFITS

- + Adjustable to accommodate various wall thickness up to 2 1/2"
- + Easy to use and works in a variety of base materials

MATERIAL SPECIFICATIONS

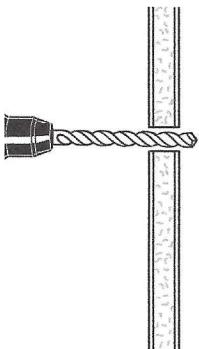

Anchor Component	Component Material
Wing	AISI 1010

Installation Guidelines

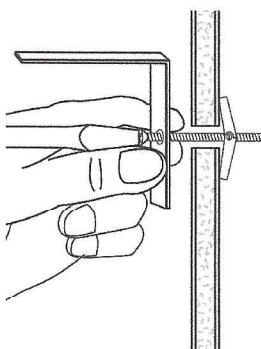

Drill the required hole through the base material. The tolerances of the drill bit used should meet the requirements of ANSI Standard B212.14. In denser materials such as high strength concrete, drill the hole 1/16" larger.

Insert the bolt through the fixture to be fastened, thread on wings, then fold the wings completely back and insert through the hole until wings spring open.

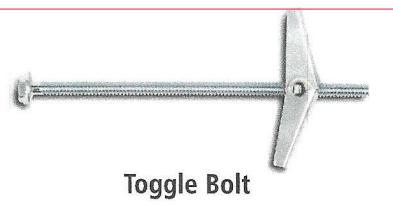

Pull back on assembly to hold the wings inside the wall to prevent the wings from spinning while tightening bolt. Turn the bolt with the screwdriver until firmly tightened.

Notes:

- Industry safety standards recommend using only 1/4 of ultimate tensile and shear values as the maximum load per anchor.
- Ultimate tensile and shear values for a SnapSkru anchor vary directly with the strength and thickness of the wall material, the screw size, and the extent of the screw engagement.
- The above table of ultimate tensile and shear values is to be used as a guide only. Due to variability and condition of wall materials and construction methods, TOGGLER Anchor System cannot guarantee that you will achieve the same results. The age, condition, and capacity of the substrate must be considered.
